

Meeting Agenda

Group: OOPP-Group77

Date: 19/10 - 21

Chair: Elin

Participants: Elin, Hampus, Alexey, David, Martin

Objectives (5 min)

- status of the project: issues/bugs
- password security
- priorities

Reports (15 min) from previous meeting

Elin: In the process of writing tests for Model.

Alexey: Sent emails are now stored under 'sent'

David: Updated the user interface section in RAD. Implemented auto-complete in text fields in writing view.

Martin: Fixed correct tabbing order. Wrote about the control layer in SDD: system architecture. created methods for long lambda functions in init. reimplemented refresh and send to do the operation in a new thread. Created progressbar for refresh. Created notifications for refresh, send, and add accounts. Worked on dynamically adjusting webview height. Created dynamic buttons for archive/restore in reading view. Fixed exception management in Storage.

Hampus: Fixed frontend for filter and search and connected against backend. Some issues remain to be fixed.

Discussion items (35 min)

- Issues/bugs:
 - the filter flow pane has magically disappeared and won't show up.
 - search and filter clear buttons clear both, not only the one pressed.
 - Default sorting
 - webview big size
 - reply wrong email address
- Password security. If we have time to fix this:
 - Create a wrapper class for account that only holds the email address and use this towards the frontend. Map this wrapper object to the actual account object and use the actual object towards services.
 - Someone can try to implement it if they have time. Post on Slack if getting around to this.

Outcomes and assignments (5 min)

Elin: info in send view, catch up on last week's assignments. go through and fix javadoc.

Hampus: Fix filter front end issue and fix so that filterview can be closed via close-button instead of the filter-button itself... Quality in SDD.

Alexey: Merge branch containing updates to send behaviour etc and fix design model in SDD. Contact Pelle about presentation.

David: Fix filter view and fix images for searching view. go through and fix scope of variables and classes and insert final when applicable. Make factories abstract.

Martin: Write SDD observer pattern, and other things. Fix webview size. Maybe fix a sending progress bar. Fix exception handling in EmailProviderService. Update readme clean thingy. Storage retrieveSuggestions exception ignore. Maybe maybe button hints.

Wrap up

- Decide a time and location for next meeting.
Thursday at 8:00, in M1204.
