

Meeting Agenda

Group: OOPP-Group77

Date: 14/10-2021

Chair: Hampus

Participants: David, Alexey, Hampus, Martin, Elin

Objectives (5 min)

- Decide new priorities for the last sprint.
- List known bugs, discuss solutions and assign to team members to solve them.
- Discuss what needs to be updated in RAD and SDD.

Reports (15 min) from previous meeting

Elin: Refactored Model into Model and Control-classes. Improved exception handling.

Hampus: Worked with Elin on Model and Control and improved exception handling. Finished backend and tests for sorting functionality.

David: Worked on finding a solution for auto-completion for email to fields. Finished the frontend for filter.

Alexey: Working on getting Microsoft server to be usable from the app.

Martin: Wrote tests and javadoc for observer pattern. Solved some bugs.

Discussion items (35 min)

- Decide new priorities for the last sprint.
- List known bugs, discuss solutions and assign to team members to solve them.
- Discuss what needs to be updated in RAD and SDD.

Outcomes and assignments (5 min)

- Outcomes from discussion items.

- Bugs/bad behaviour:
 - Sometimes the newest email is not put at the top of the inbox.
 - Bug so tab tabs in wrong order in WritingView
- RAD, SDD:
 - Need to update Quality-part of report with new known issues, improvements etc.
 - Update System architecture of SDD.
 - Update introduction with stakeholder info in SDD/RAD.
 - Update System design in SDD.
 - Update sketches in RAD.
- Priorities/additions:

- We decided to primarily continue polish and finish functionality that we have implemented. Some parts from non-implemented user stories may be considered if there is time. Would have been good with extra functionality to fatten the model, but we found it more important to polish what we have with the limited time being left.
- (re)Assign to each group member which issues to solve.
 - Elin: Try to fix inbox bug. Stakeholders in SDD & Rad. Write tests for Model and Email. Javadoc comments in Model.
 - Alexey: Update System design in SDD. Try to implement Drafts functionality if there is time. Finish Microsoft support (soon done).
 - David: Update user interface in RAD. Continue with auto completion/suggestions for to-field in write.
 - Martin: Fix tab bug. System architecture in SDD. Clean up.
 - Hampus: Quality in SDD. Connect frontend-part to backend for filter, search and sort. Add missing parts of filter to frontend.

Wrap up

- Decide a time and location for next meeting.
- Next meeting Tuesday 19th October in M1203C, at 8:00.
