Meeting Agenda

Group: OOPP-Group77
Date: 14/9
Chair: Hampus
Participants: Hampus, Elin, Alexey, David, Martin

Objectives (5 min)
- Discuss domain and design model and both recent and upcoming changes to both models.
- Discuss future workflow
- Discuss today's seminar

Reports (15 min) from previous meeting

Everyone has been working together on the domain and design model, mainly. Besides this, Hampus and Martin have both come with individual proposals regarding the design model. These currently work as the foundation of the group's joint process. Elin has looked into these proposals further to come with further ideas. Additionally, Hampus has done some programming in a separate project to figure out certain things related to api's. Martin has done some coding on the group's github repository.

Discussion items (35 min)

- Discuss domain and design model and both recent and upcoming changes to both models.

We are a bit unsure about the domain model, but are going with the sketch we have right now for the seminar and will consult Aline during Thursday's meeting, regarding both domain and design model.

- Discuss future workflow.

The group has possibly been a bit too eager to start programming. While this has led to useful insights in the api's etc, it was also difficult for everyone to follow along and contribute fully.
Therefore, we should now try to complete the design model, sequence diagrams and reformulate our tasks before we start coding. It's hard to start coding before we are sure what every class and method are supposed to do.

When coding, we decided to make jUnit tests before creating methods (one test class per class), and be sure to comment everything thoroughly. It should be easy to understand what the method does and what it returns, for all group members. Authors should include their name in the @author tag in javadoc, so that other group members can consult the author if

needed.

Outcomes and assignments (5 min)

- Seminar

Need slides for the seminar. Assignment for Alexey to create slides for the seminar and be head responsible for explaining the project.

Wrap up

Next meeting Thursday 16/9 on campus.
