Meeting Agenda

Group: OOPP-Group77
Date: 7/9
Chair: Alexey
Participants: Hampus, Elin, Alexey, David, Martin

Objectives (5 min)
  - What everyone has done since the last meeting
  - What state the project is in right now.
  - Discuss testing.
  - Discuss changes in UML diagram

Reports (15 min) from previous meeting
Alexey: Has started with the EmailBuilder class, created a writeEmail method. Needs to connect it with AccountInformation class.
Hampus: Has worked in SystemManager class so that it finds OS and finds the right path where to create directories. Maybe the creation of files should be moved from AccountHandler to SystemManager instead.
David: Has created an error message window when adding new email, finished the create emailView task and needs to talk to Martin so the addEmail-functions work together
Elin: Created a new view, WritingView.fxml, with suitable text fields and buttons. Also created a corresponding writingController (currently a skeleton).
Martin: Created method in AccountHandler that creates the files/directories depending on info given from SystemManager. Also created method that stores accounts

Discussion items (35 min)

- Discuss testing

Need to talk to Aline about how we are supposed to test. Once some tests are in place, we need to use Travis. Hampus will check how this is done.

Things to keep in mind: One test class per class. One assertion per test method.

- UML diagram

Should we move association between Storage to FolderParser to an association between FolderParser and Connector instead? This is because FolderParser needs the Store object in Connector. Talk to Aline about what we should do.

Outcomes and assignments (5 min)

Wrap up

Meeting with Aline 15.15.
